

Drill #2

Scenario:

Out in the school yard...

You are out in the school yard, and a child experiences an anaphylactic reaction.

Questions:

- Where do you find the child's EpiPen®? (Is this different for each allergic child in the school?)
- Who is responsible for getting it?
- Who is responsible for injecting it in the child?
- Who is responsible for calling 911.
- Aside from EpiPen®, what are the other medicines you could need?
- If it is located in the main office, who is responsible for getting the other medicines from there?

What you should learn from this drill:

- ✓ Know the closest location of a child's EpiPens® from the playground (Medicine kit carried by staff? Fanny pack worn by the child? Classroom? Main office?).
- ✓ If multiple staff members are outside during recess, be prepared to delegate tasks like:
 - ✓ Getting EpiPens® and other medicine (back up EpiPen, Benardryl, asthma medication). Know where to direct a person to get them.
 - ✓ Calling 911
- ✓ If not all staff members are trained to use an EpiPen®, you should know who is.
- ✓ If you don't carry a cell phone, know how to get in contact with the main office to call 911.
